

GS1 US Data Hub Fall '22 | RELEASE NOTES

GS1 US Data Hub|Location allows you to identify, create, manage, use, share, and verify location data through one convenient platform. The focus of GS1 US Data Hub Fall Release '22 is to enhance the user experience, performance, and functionality of GS1 US Data Hub|Location. We have also taken the first steps toward supporting the new GS1 GLN Data Model by introducing several key attributes. The user interface has received extensive updates to support ease of use, as well as new functionality.

Enhancements and Fixes

GS1 US Data Hub|Location

Location Create/Manage User Interface

- General interface updates and modernization
- Enhanced Filters in the My Locations Grid
- Export now available throughout Create/Manage and no longer isolated in a separate Export tab
- Addition of Search functionality that utilizes all GLN attributes (Matching Location: View/Use)

Location Import

- One unified Import template for all industries and supply chain roles.
- Redesigned User Interface with enhancements such as a new Drag and Drop file upload option
- "Download Locations for Update" relocated to Export Locations Data dropdown on My Locations page

GS1 GLN Data Model Updates

Updates to the following areas of GS1 US Data Hub|Location in support of the new data model:

- Data Hub|Location Create/Manage (Create, Search, Import, Export)
- Data Hub|Location View/Use
- Data Hub|Location View/Use API

Location Bulk Actions

Ability to complete the actions listed below for multiple locations with one operation:

- Update Location status from the Manage Locations page
- Revert to Live Version from the Edits In Progress tab (Only with Approvals turned on)
- Approve/Reject from the Pending Approvals tab (Only with Approvals turned on)

Location Hierarchy Updates

- Visual and performance enhancements to the Location Hierarchy Display
- Addition of a graphic displaying the number of children beneath a parent location
- Inclusion of Draft Locations in the Hierarchy view
- Hierarchy Export Performance improvements
- User Assignment tables consolidated into a single table

Location View/Use

- Redesigned with upgraded filtering and new shelf style search and export forms

Updates/Fixes for Data Hub Security Roles

- New Audit role for companies that have Approvals enabled
 - Selectable role in Administration settings that gives a user view-only privileges for all of the locations managed by their own company.
 - Edits or any other changes to a Location record are not permitted
- Resolved an issue where a user had to login before security roles could be applied to their user account. (Only applicable for companies with Approvals enabled)
- Resolved an issue where the user list in the Security section of the Administration menu was not updating correctly based on actions taken in the GS1 US User Portal. (Such as setting a user to Inactive status)

Help and Support

- The GS1 US Data Hub|Location User Guide has been completely revised for the Fall '22 release
