

GS1 US Data Hub Summer 2022 | RELEASE NOTES

GS1 US Data Hub| Product: Create/Manage allows you to identify, create, manage, use, share, and verify product data through one convenient platform. There are two focus areas for this update. The first is the introduction of the Unit of Use Packaging Level for our Healthcare users. The second area of focus is for GS1 US Data Hub: Enterprise Edition subscribers, with the addition of Automated GDSN updates, as well as GTIN-8 Compatibility.

Enhancements

GS1 US Data Hub| Product

Unit of Use Support

- A toggle to activate the Unit of Use packaging level has been added in the Administrator section of GS1 US Data Hub under Product: General Settings. When selected, this setting will enable Unit of Use functionality throughout GS1 US Data Hub: Product.
- Please see the updated [UDI User Guide](#) for more information, or for assistance regarding Unit of Use in GS1 US Data Hub.

GTIN-8 License Import

- GS1 US Data Hub: Enterprise Edition subscribers can now download a template to facilitate the Import of GTIN-8 licenses from other GS1 Member Organizations into GS1 US Data Hub.

GTIN-8 Support in GS1 US Data Hub| Product

- GTIN-8 licenses that have been imported to GS1 US Data Hub can be used to create new product records via Import. These records can then be managed in GS1 US Data Hub| Product and are eligible to be uploaded into the GS1 Registry Platform.

Note: GTIN-8 barcode, and GS1 US Data Hub| Product: View/Use Support will be coming in a future release.

GDSN Automation

- GS1 US Data Hub: Enterprise Edition subscribers now have the ability to choose between manual, or automatic data imports from GDSN.
 - GS1 US Data Hub will check GDSN twice daily for updates.
 - This setting is located in the Administration tab in GS1 US Data Hub.
 - Each new IP GLN must be entered and triggered for a first publication and can then be set for automatic import into GS1 US Data Hub| Product.
