

GS1 US Data Hub® 3.1 | RELEASE NOTES

EFFECTIVE: November 14, 2016

GS1 US Data Hub enables GS1 US subscribers to identify, create, manage, use, and verify data through one convenient, data-sharable platform. Release 3.1 covers user requested changes and clarifications since the last update June 28, 2016.

REQUIREMENTS

- Product > Default Share: All products are shared automatically with Product View/Use Subscribers. Product owners may opt out with a single click at Administration > Product General Settings. Selective sharing is still an option. Please download the “Sharing Your Product Data” [mini-guide](#) for more information
- Location “Crosswalk” Export File: All Location subscribers may run the level extract formerly offered in the GLN Registry by exporting the Location Hierarchy and selecting the box “Show all parent GLNs for each Location”. Refer to a new visual aid for guidance.

ADDITIONS

- Product Details: SKU field is moved to appear under the Brand Name field for ease in future reference. This field is user driven and optional.
- Product Details: Guided text added to enable user in steps needed to set up products for barcodes. Call out message is added to allow user to view list of GS1 Standards Professional Barcode Print Vendors without leaving the Data Hub site
- Location > Export Specifications includes selection for Status and/or Last Modified Date
- Location > View / Use: Data table includes Status and Last Modified Date columns
- Help > Help Center: New Reference Guides added for Default Share and Location email preferences

CORRECTIONS

- Product > Manage > Hierarchy: “Direct Children” label modified to read “Hierarchy”
- Additional processing improvements are made to product and location modules
- Continued changes on the user interface to improve consistency across modules
- Comma separators added on values greater than 999 in dashboard and prefix drop down lists
- Code added to strip invalid characters and empty rows from import files to improve processing time

CHANGES

- Product > Create: Assign GTIN buttons relabeled for clarity
- Product > Manage: Improvements to labels For Reuse start and available dates
- Location Administrators are assigned all roles by default
- Location Administrators can modify roles of Location users
- Location address lines 1 and 2 are no longer reversed as part of USPS verification processing
- Export file naming includes date / time the file is created
- Increased data table and file sizes to 10,000 record limit (over previous limit of 1,000) for Search results
- Reference documents are updated and are available in the Help Center by subject matter

REMOVALS

- Product > Manage: GTIN-13 column removed from “Export All Products from Table” results file until Data Hub can support GTIN-13 (EAN)
